Radiators

Our radiators are individually thermostatically controlled. The temperature figure on the left gives you the room temperature and the figure on the right gives you the desired temperature. The radiators are not instant heat so will take a short amount of time to reach the set temperature.

How to raise or lower the room temperature

To raise or lower the room temperature press the +/- key until the desired room temperature indicator (bottom right of screen) displays the desired temperature.

How to know if the heater is working

When the temperature setting (bottom right of screen) is greater than the room temperature (bottom left of screen) the temperature setting will flash continuously to indicate the heater is heating. If the temperature setting is not flashing the heater is not heating.
